Professional Headline

Senior Python Backend Engineer / Data Engineer | ETL, APIs, Snowflake, AWS | 10+ Years Experience

---

Professional Summary

Senior Python Backend Engineer with **10+ years of hands-on experience** designing and delivering **production-grade APIs, ETL pipelines, and automation systems** for enterprise clients. Strong expertise in **Python, Flask, Snowflake, MongoDB, SQL, AWS, Docker, and asynchronous processing (Celery)**. Proven ability to build scalable data pipelines, backend services, and cloud-deployed solutions with robust logging, monitoring, and failure handling. Seeking **senior individual contributor roles** focused on backend systems, data engineering, and platform automation.

Core Competencies

- **Primary Skills:** Python, ETL Pipelines, Backend Development, Flask REST APIs
- **Frameworks & Platforms:** Flask, Celery, Docker, Docker Compose, AWS
- **Databases & Data Stores:** Snowflake, PostgreSQL, SQL Server
- **Data & Integration Tools:** GitHub, Postman, Jira
- Other: Automation, Logging & Monitoring, Asynchronous Processing, API Performance Optimization

---

Professional Experience

Wipro Limited, Bangalore

Senior Software Developer

Feb 2025 - Present

SBO Reporting Automation (AMD Client)

- Working as a **Senior Python Backend Engineer / Data Engineer**, responsible for ETL pipelines and backend services.
- Designed and developed **Python-based ETL pipelines** to synchronize data between **MongoDB and Snowflake**, ensuring accurate one-to-one data mirroring for enterprise reporting systems.
- Implemented **delta-based incremental extraction logic** using timestamp and update-based filtering, reducing unnecessary data movement and improving pipeline efficiency.
- Built **MERGE and DELETE synchronization logic** in Snowflake to keep target tables fully aligned with source systems.
- Created **modular, reusable SQL frameworks** by externalizing queries into dedicated Python modules, improving maintainability and scalability.
- Implemented **data change detection** using MINUS comparison techniques to identify new, updated, and deleted records across large datasets.

- Developed a **Celery-based asynchronous task framework** to enable parallel job execution and improve ETL throughput.
- Built **centralized logging, error handling, and automated email alerting,** enabling early failure detection and faster incident resolution.
- Containerized applications using **Docker and docker-compose,** standardizing deployments across Dev, UAT, and Production environments.
- Collaborated closely with data engineering and QA teams to validate pipelines and ensure audit-ready documentation.

HCL Technologies, Bangalore

Technical Lead (Developer)

April 2021 – January 2025

OneBOM Integration (Intel):

- Designed and developed a **high-performance Generic Logging API** to centralize application logs and accelerate production issue resolution.
- Built and automated **email notification workflows** to handle high-volume system communications, reducing manual intervention.
- Identified and resolved **API performance bottlenecks**, improving scalability and system reliability.
- Performed **API validation and testing** using Postman to ensure functional and integration correctness.
- Deployed backend services on **Cloud Foundry**, integrating seamlessly with existing enterprise systems.
- Authored technical documentation and conducted **knowledge transfer sessions** for development teams.

MedMind & MADP (Clarivate Projects)

- Developed **REST APIs using Python (Flask) and PostgreSQL** to support document processing and analytics workflows.
- Automated **document grouping and classification processes**, significantly reducing manual effort.
- Built automation solutions to convert **unstructured PDF data into structured datasets**, improving data accuracy and reporting speed.
- Designed custom **data-cleaning rules and validation logic,** reducing reporting errors and rework.
- Deployed scalable solutions on **AWS**, ensuring reliability and performance under load

---

Optum Global Solutions

Associate Data Analyst

Sept 2019 – Feb 2021

- Automated **FTP-based data transfer workflows**, improving reliability and reducing operational failures.

- Designed and optimized **Python and SQL scripts** to improve database interaction efficiency.
- Collaborated with onshore teams to analyze system issues and implement technical fixes.
- Translated business requirements into technical specifications for data processing workflows.

APSSDC

Python Developer

Feb 2015 – August 2019

- Designed and implemented Python-based applications and automation projects alongside technical training programs.

Education

B.Tech – Computer Science & Engineering

DBS Institute of Technology, JNTU Anantapur University

Languages: Telugu, English, Hindi
